

Augmenting Social Awareness in a Collaborative Development Environment

? How do we strengthen or build **trust** among developers of globally distributed teams who have few or no chances to meet?

💡 Exploit **Social Awareness**: The understanding that teammates have about the social connections within their group

⚙️ Our proposal: **SocialTFS**

- Extension of MS Visual Studio and TFS
- Aggregates developers' personal content from social media into TFS
- Different timelines (Static, Dynamic, Interactive)
- Winner of the 2011 SEIF Award from Microsoft Research
